

AccessSTAT™ Business Analytics – Imaging, Networks, Workflow

New or experienced – as managers, we all need information to base decisions on. It affects our work routines, investments in equipment and people, and the outcomes and satisfaction of the people we serve. Real time information for immediate action and historic information to identify any trends. AccessSTAT delivers it to benefit management personnel at all levels. Now you have the data to prove what's making you money, costing you money through poor productivity, and where any slowdowns are coming from for immediate action. See how AccessSTAT helps your role in your facility.

C-Level Management benefit

- Identify key aspects of your facility's productivity with ease.
 - One location to view data from network, workflow/patient throughput, imaging productivity: all your systems communicating with DICOM or HL7
 - Easy to read graphical dashboard lets you drill down to the level you want
- Know the latest results with automated reports for desired information
 - Custom reports can be created from the data for your preferred presentation
- Provides for use of advanced analytical tools for more predictive analysis
- Alerts – you define which alerts you want to receive and the trigger points for them.
- Secure raw data

Outreach Management benefit

- Identify which physicians are referring the most business to you
 - You have the numbers to strengthen your presentation when talking to potential referring physicians
 - Helps determine which types of physicians you want to reach out to
- Know what types of exams are being referred to you
- Provides the data you need to negotiate with referrers and identify who's providing the most profitable referrals
- Alerts you when a physician's referring level drops to a point you set so you can take action to determine why or when it goes up, so you can acknowledge their contribution

Department Management benefit

- Identify which techs are most productive and which are not
 - You can see who may need additional training or assistance
 - Helps with your performance evaluations
- Know which modalities are being over or under utilized
- Provides the data to show when you need to adjust schedules
- Alerts you when patient wait times exceed the limit you set. You can take action immediately to keep patient satisfaction high

Network/IT Management benefit

- Identify blockages / slow-downs historically AND in real time
 - NO added load on the network
 - Works in Virtual or Physical environments, Single or Multi-site
- Know which workstations are connecting to sites outside the network and what IP they are connecting to
- Provides the data to prove when the network is not the problem as well as when network investments / upgrades may be needed
- Alerts you when network traffic reaches points you set so you can see when a problem may be developing

AccessSTAT™ is:

- A powerful tool that monitors and reports your Radiology data and network traffic and so much more
- Nonintrusive to your network
- Resource friendly – does not take ANY resources from your network
- HIPAA compliant
- Interface independent – needs NO interface
- Real time reports
- Secure historical raw data
- Functional with ANY RIS/PACS system.
- Proven - The core of this product has been used for more than 12 years in various locations around the world.
